multifunctional PMS

integrated call processing for hotels

If you already have a high-end, front-of-house system and you need to log, price and allocate your guests' calls and have them automatically transmitted to your front-of-house system, Callista Multifunctional for PMS incorporates an integrated PMS call processing interface exactly for this purpose.

Callista's PMS interface provides constant monitoring to ensure calls have been received by your front-of-house system which means you'll never miss another call. If there are transmission errors, Callista will re-transmit calls until your system responds. What's more, when your system is off-line for backups or for any other reason, Callista will automatically buffer all calls and transmit them when your system is back on-line.

In addition, all the multi-layered features of Callista Multifunctional are also included providing automatic scheduled reports, hotel departmental and telephone reports, automatic on-line updates directly from the internet, automatic backups and the powerful Price Modification feature which lets you set up your own customised call pricing plan to maximise your investment in your telephone system.

Contact us for more information on what Callista Multifunctional for PMS can do for you.
